

4.3 OSI-XDP

Ocean Series offers the saltwater fisherman the perfect propulsion package. Everything from better fishability to greater reliability to lower initial purchase and operating cost.

An Ocean Series propulsion system eliminates outboards from the transom, leaving nothing to stand between the fisherman and the fish. No more outboards to obscure sight lines. No outboards to obstruct fishing lines. And you'll be able to run your electronics all day while fishing without draining your battery, thanks to the Ocean Series' 65-amp alternator.

Once you've taken back the transom with an Ocean Series propulsion system, you'll never go back to outboards again. Copyright Volvo Penta 2005.
