

## Imagery Data

The imagery data contains catalog information. Additional item information is available in the Catalog Export on our website.

## MasterData.csv

This file is the data file that contains long descriptions and image names as well as other relevant product information. The items in this file were identified as available at the time the file was created, and the data was extracted from our catalog database. Additionally, catalog database maintenance is ongoing, so there may be some information not yet available.

We recommend using the WebShortDescription for product names, and WebLongDescription for product descriptions, which are more product specific descriptions. Other Web field contents are in progress. Additional product information can be found in the Features field.

Images, ProductName and LongDescriptions may not be specific to an individual part. For example: There are items which contain the same module ID (example below) which identify the main part number and replacement part(s) or accessories with the same long description. These items should be reviewed for use.
